CONFIGURABLE SOLUTIONS FOR SKID AUTOMATION

- Configurability means just one hardware and one software to handle;
- A Cloud solution means no software to install on PC;
- "Tailored" logic function already implemented means Plant management efficiency;
- Same graphic on both Web portal and HMI means comfort feeling on remote management.

APPLICATIONS

- CIVIL INSTALLATIONS
- INDUSTRIAL PLANT
- RESIDENTIAL CONSTRUCTIONS

SOLUTIONS FOR AUTOMATION AND PLANT REMOTE CONTROL

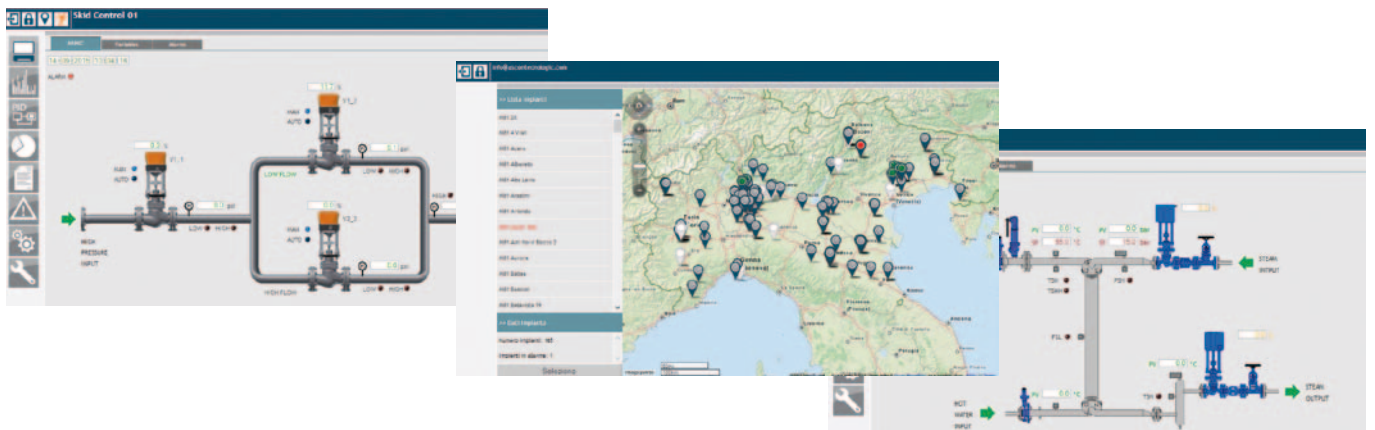

With its innovative approach Ascon Tecnologic offers a simple manner to manage different automation solutions with one product only.

In fact, the possible variants of the process can be activated by touch screen tools.

The sinoptic is then automatically adapted as well as the different control modules present into the pre-programmed unit.

- Programmable controller with 12 analogue inputs, 12 digital inputs, 4 analogue output and 10 relay outputs, 8 digital in + 8 digital out and 4/8 analogue in/out expansion modules;

- Touch screen HMI for configuration of different skid layouts, supervision of real time variables, alarms management and historical data;
 - Remote supervision for all the installation connected to our AT on Cloud web portal;
 - Wire or wireless connection via Modem Router UMTS.
- Each solution is tailored on customer demands and designed to fit different control needs on modular basis.
- Our proposal is completed by on-line Cloud scada solution according to the trend of automation "Industry 4.0".
