

DIN rail mounting dual loop controller/analogue acquisition module delta**due**[®] series **D2 line**

Two loops in the space of one

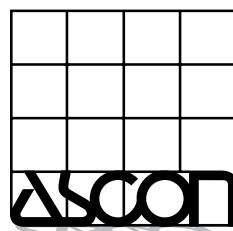

A common bus for serial power supply and communications, total withdrawability, ease of replacement even with the power supply on, digital inputs for remote commands, the option of acquiring or controlling two analogue variables makes the **delta**due**[®]** D2 line a powerful and flexible instrument, suitable for solving the most diverse problems of field signal management.

Together with the DX module, it can be used in PROFIBUS DP[®] and DeviceNet[®] networks, with the automatic reconfiguration option (hot swapping).

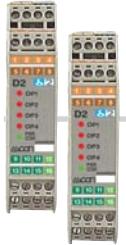

E

ISO 9001 certified

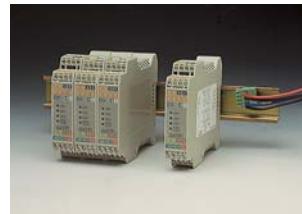

Advantages and peculiarities

Keeping costs low

- Modular construction and compact dimensions:
 - Quick mounting on DIN rail;
 - Possibility of prewiring;
 - Common bus for power supply and serial communications.

Wiring error reduction

High integration

- On-machine or rear panel mounting
- Remote/centralised control;
- RS485/CanBus;
- PROFIBUS DP, DeviceNet (with DX module).

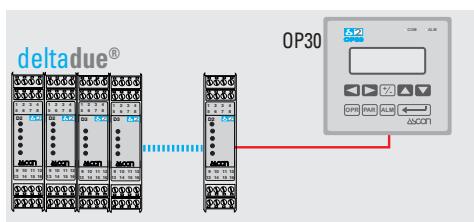

- Withdrawable;
- Easy replacement without switching off the power supply;
- Hot swapping, automatic configuration of the new or replaced modules (with DX module).

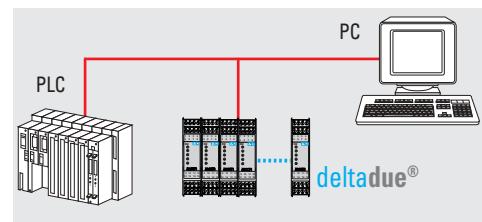

Easy maintenance

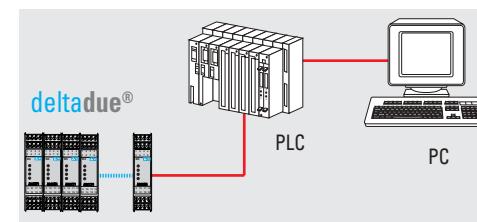

Local control with operator panel OP30

Distributed control with PLC with dedicated modules for critical loops

Distributed control with PC supervision

		5 Single action	OP4	OP2
		6 Single action	OP1	OP2, OP3
PV2	7 Single action	OP4		

Technical data

Features at env. 25°C	Description				
Total configurability	By means of the configuration tool it is possible to select: - type of input - the type of control input - type of output - type and functionality of the alarms - type of Setpoint - control parameter values				
PV1 and PV2 inputs	Common characteristics	A/D converter with resolution of 50,000 points Update measurement time: 0.2 s Sampling time: 0.5 s Input bias: -60...+60 digit Input filter: 1...30 s OFF = 0			
	Accuracy	0.25% ± 1 digit (for temperature sensor) 0.1% ± 1 digit (for mA and mV)	Between 100...240Vac the error is minimal		
	Resistance thermometer (for ΔT : R1+R2 dmust be <320Ω)	Pt100Ω at 0°C (IEC 751) °C/F selectable	2 or 3 wires connection Burnout (with any combination)	Line: 20Ω max. (3 wires) Input drift: 0.35°C/10°C Env. Temp. <0.35°C/10Ω Wire Res.	
	Thermocouple	L, J, T, K, S, R, B, N, E, W3, W5 (IEC 584) °C/F selectable	Internal cold junction compensation with NTC Error 1...20°C ±0,5°C Burnout	Line 150Ω max. Input drift <2µV/1°C Env. Temp. <5µV/10Ω Wire Res.	
	DC input (current)	0/4...20mA, 2.5Ω ext. shunt Rj >10MΩ	Burnout. Engineering inputs, decimal point position configurable low range: -999...9999 high range: -999...9999 (min. range: 100 digits)	Input drift: <0.1%/20°C Env. Temp. <5µV/10Ω Wire Res.	
	DC input (voltage)	10...50mV, 0...50mV Rj >10MΩ			
	Mutual isolation	Isolation voltage 500V			
Digital input	Closing the external contact allows:	Auto/Man mode change, switching between 2 stored setpoints, measure hold, alarms acknowledge, outputs lock			
Operating mode	2 acquisition channels, 2 single action loops PID or ON/OFF with 1, 2, 3 or 4 alarms				
Control mode	Algorithm	PID with overshoot control or ON/OFF			
	Proportional band (P)	0.5...999.9%			
	Integral time (I)	0.1...100.0 min	OFF = 0		
	Derivative time (D)	0.01...10.00 min			
	Error dead band	0.1...10.0 digit			
	Overshoot control	0.01...1.00	Single action PID algorithm		
	Manual reset	0.0...100.0%			
	Cycle time (time proportional only)	1...200s			
	Control output high limit	10.0...100.0%			
	Control output low limit	0.0...90.0%			
	Soft start output value	0.1...100.0%			
	Control output hysteresis	0.1...10.0%		ON/OFF algorithm	
OP1-OP2 outputs	SPST relay NO, 2A/250Vac (4A/110 Vac) for resistive load SSR, 1A/250Vac for resistive load SSR drive: 0/5Vdc, ±10% 30 mA max. To meet the double isolation requirements, OP1 and OP2 must have the same load type				
OP3-OP4 outputs	Non isolated logic: 0/5Vdc, ±10% 30 mA max.				
Outputs functions	For all the outputs the inversion function (NOT) is available				
AL1 - AL2 - AL3 - AL4 alarms	Hysteresys	0.1...10.0%			
	Action	Active high	Action type	Deviation threshold ±range Band threshold 0...range Absolute threshold whole range	
		Active low			
		Special functions		Sensor break, Loop break Alarm acknowledge (latching), activation inhibit (blocking)	
	Alarm source	Assigns the alarms to the Present Value of LOOP 1/LOOP 2 (PV1 or PV2). If set as deviation or band, the alarms are assigned to the Setpoint of LOOP 1 or LOOP 2			
Setpoint (for each loop)	Alarm output	Assigns the alarm condition to an output (OP1, OP2, OP3, OP4). If not configured, the alarm status is available on the coil			
	Local	Up and down ramps 0.1...999.9 digit/min. (OFF=0)			
	Local + 2 stored	Low limit: from low range to high limit High limit: from low limit to high range			
Fuzzy-Tuning one shot (1 loop at a time)	The controller automatically selects the best method according to the process conditions	One shot Auto Tuning One shot Natural Frequency			

Fuzzy-Tuning

Two methods of tuning are available:

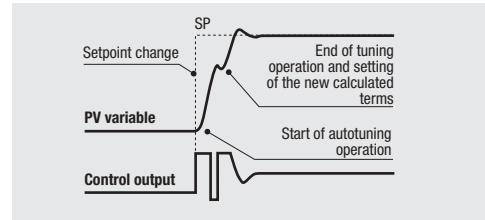

- **Auto-Tuning "one shot"**
- **Natural frequency "one shot"**

The **Fuzzy-Tuning** automatically selects one of the two methods which assures the best result for each condition.

Auto-Tuning method best works on the step response basis.

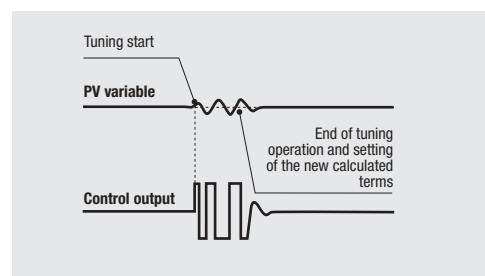

When activated, if a deviation exists between the Setpoint and process variable larger than 5% of scale range, the controller modifies the output value. Then, in a short time, it calculates the PID parameters and the new algorithm is operational immediately.

The main advantages of this method are fast calculation and quick implementation.

The **Natural frequency** method best works when the process variable is very near to the Setpoint. When activated, it causes a process oscillation around the Setpoint value in order to calculate the optimal PID parameters.

The main advantage of this method is the better definition of PID parameters.

Technical data

Features at 25°C Env. Temp.		Description
Auto/Man station	Standard with bumpless function, Switched by digital input or serial communications	
Serial communications	RS 485 isolated, Modbus/Jbus RTU protocol, 1,200, 2,400, 4,800, 9,600 bit/s 2 wires	
Operational safety	Measure input	Detection of out of range, or input problems causes automatic activation of the safety strategies
	Control output	Safety value: -100...100%
	Parameters	Parameters and configuration data are stored
	Outputs lock	in a non volatile memory for an unlimited time
General characteristics	Power supply (PTC protected)	24Vac (-20...+12%) 50/60Hz and 24Vdc (-15...+25%) Power consuption 3 W max.
	Safety	EN61010-1 (IEC1010-1) installation class 2 (2.5kV), pollution class 2, instrument class II
	Electromagnetic compatibility	Compliance to the CE standards
	UL and cUL approval	File E176452
	Protection	Terminal blocks IP20
	Dimensions	Pitch: 22.5 mm - height: 99 mm - depth 114.5 mm
	Weight	156 g approx.

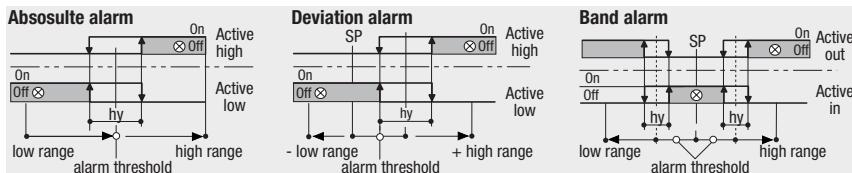

Alarms

Four thresholds can be addressed to the four outputs. For each alarm can be configured:

A - Alarm source

Each alarm can be associated to one of the input loops. If configured as absolute alarm the threshold is compared with the present value of the selected loop (PV1 or PV2). If configured as deviation or band alarm, the threshold is compared with the selected loop Setpoint (SP1 or SP2).

B - Alarm type and function

C/D - Alarm acknowledge and Start-up disable

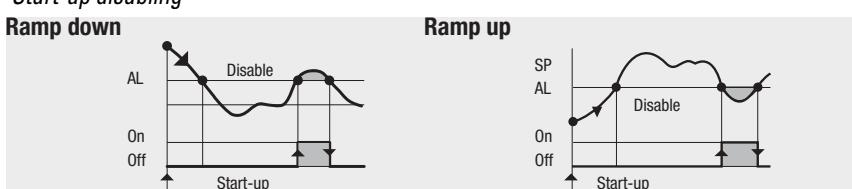

Alarm acknowledge and disabling function for AL1, AL2, AL3 and AL4 alarms

For each threshold can be configured, using the correct parameter value: none, alarm acknowledge, start-up disable or both active (acknowledge + start-up disable).

Alarm acknowledge

The alarm status remains until the acknowledge signal arrives through the serial communications port or the digital input. After this operation alarm status disappears only when the alarm condition is no longer present.

Start-up disabling

E - "Loop Break Alarm" (LBA) or sensor break functions

LBA operation delay

Set "None" to obtain an immediate action to a sensor break detection.

Set a value between 1...9999 s to obtain a delayed action to a loop break detection.

Also with the LBA operation delay set, if the error detected is caused by a sensor break, the action is immediate. When the cause of the alarm disappears, the alarm status stops.

F - Alarm output

Physical output of the alarm

When not used as control outputs, one or more alarms (OR function) can be linked to OP1/OP2/OP3/OP4. This parameter can be set as: Coil (internal status), OP1, OP2, OP3, OP4.

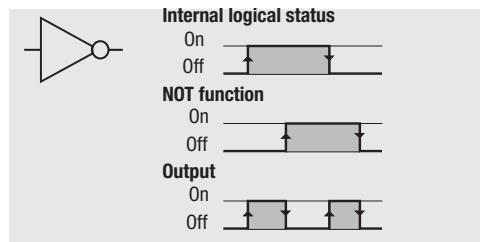

Digital input

During the configuration procedure, to the IL digital input can be connected one of the following functions:

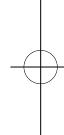

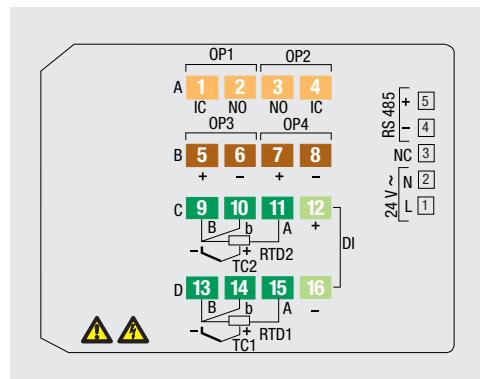

- Measure Hold: PV1, PV2 or PV1 and PV2.
- Auto/Man mode change: PV1, PV2 or PV1 and PV2.
- Recall of the 2nd stored Setpoint: 1° setpoint LOOP 1, 1° setpoint LOOP 2 or 2° setpoint LOOP 1 and LOOP 2.
- Alarm acknowledge;
- Outputs block.

Output functions

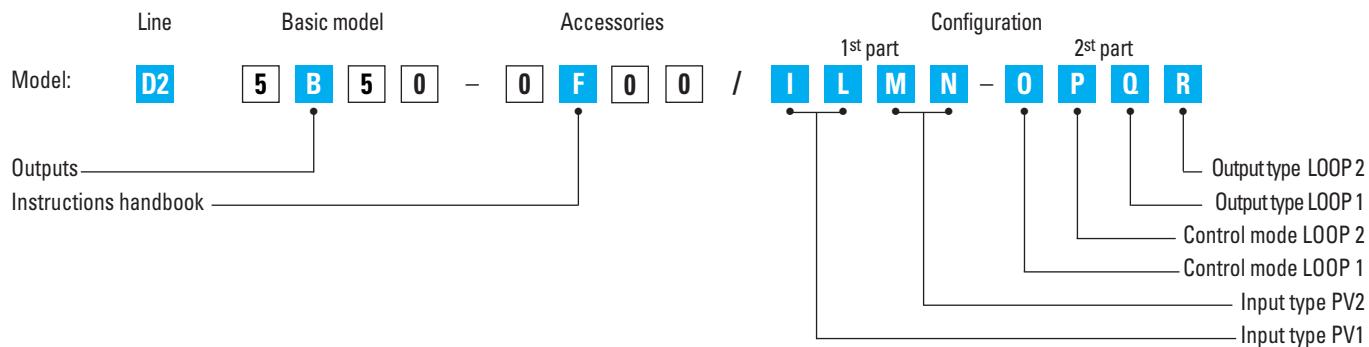

Is possible to enable, separately for each output (OP1...OP4), the negate (NOT) function of the internal status.

Installation kit

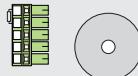

Each set of interconnected controllers requires one model **AD3-KIT/BA.RT.PC.CD** kit:

Power supply and
serial communications
connector
code AD3/BA

Couple of connector
protections
code AD3/PC

Connector with termination
resistor for serial
communications
code AD3/RT

CD Rom with
configuration
software tool
code AD3/CD

If not differently specified the controller will
be supplied with standard version
Model: D2 5350-0000
